## Classification Details

### Stage 4 - Significant recession and crown loss

Clear bilateral temple recession with some frontal hairline recession. Hair appears healthy with good thickness. The pattern suggests classic male pattern baldness at Norwood Stage 3. Total estimated grafts needed: approximately 2,600 for comprehensive restoration of visible areas.

Clear frontal and mid-scalp thinning with significant recession. The remaining hair shows good caliber. Pattern suggests progression from temples toward mid-scalp with some preservation of hair on top but significant miniaturization visible.

## Area-by-Area Breakdown

Area	Severity	Confidence	Est. Grafts
Frontal Hairline	Moderate	90%	1,100
Temples	Moderate	95%	800
Mid Scalp	Moderate	90%	1,015
Crown	Mild	60%	333
<b>Total (Baseline)</b>			<b>3,248</b>

## Hair & Donor Assessment

Attribute	Value
Hair Color	Black

Hair Texture	Straight
Hair Thickness	Medium
Donor Area Density	Medium
Donor Quality	Good
Available Donor Grafts	4,000

*Appears to have adequate donor density based on visible hair characteristics*

## Recommended Technique

**FUE (Follicular Unit Extraction)** | Alternative: FUT (Follicular Unit Transplant)

FUE is preferred for most patients. FUT may be considered for maximum graft yield.
